## PRESS RELEASE

DzymeTech changes its name to **ANDalyze** and receives new funding as it prepares the launch of new products for Real-time Water Testing for Heavy Metals using the power of DNA

*ANDalyze will be exhibiting at the Water Environment Federation's Annual Technical Exhibition and Conference, WEFTEC.09 tradeshow in Orlando, Florida on Oct 12-14, Booth #1706.*

**Champaign, IL, USA, September 14<sup>th</sup>, 2009:** DzymeTech has changed its name to **ANDalyze**.

ANDalyze has developed catalytic DNA biosensor technologies for detection of heavy metals and a variety of other chemicals. The first product will be a lead testing kit that fulfills a significant niche market, detection of toxic lead in water. ANDalyze will be showcasing several new products at the [WEFTEC 2009](#) tradeshow in Orlando, Florida on Oct 12-14, Booth #1706.

### **About ANDalyze Inc.**

[ANDalyze](#) offers products for testing water contamination using catalytic DNA technologies. The company has developed a methodology for detecting and quantifying chemical levels based on the recent discovery of the catalytic properties of DNA. This technology and product is a universal platform that offers simple, fast, inexpensive and reliable detection of trace metals and other target chemicals. ANDalyze was founded by Dr. Yi Lu at the University of Illinois and [Illinois Ventures](#). Company contact and product information can be found at [www.andalyze.com](http://www.andalyze.com).
